DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-25 are rejected under 35 U.S.C. 102(c) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Pervan'229.

The applied Pervan'229 reference teaches that it is known in the art to make and use a wooden board comprising HDF of MDF substrate board with an upper side and an underside, the upper side having a decoration. A sealing layer of melamine is applied and decoration is printed. A wear-resistant layer is also applied to the laminate. See column 2, lines 20-52, column 3, lines 20-30, column 6, lines 16-22 and claims.

The applied reference teaches that high pressure is commonly used to make laminates. Also, the reference teaches that "decorative pattern can be printed on the surface of the core" and that core can be provided with a surface layer. The applied reference specifically teaches that printed or decorative paper is impregnated with melamine. Final product of the applied reference is identical to the claimed article.

Regarding the process claims, it is the examiner position that the prior art also teaches the claimed process. In any event it would have been obvious to print a decorative matter on the coated core or include the printed paper matter in the layer that is applied to the core or coated core and then applied a wear layer and press all layers together, since it has been held that rearranging parts of an invention involves only routine skill in the art.

Furthermore, it would have been obvious to choose binding polymers for individual layers and add abrasion resistant granules to the wear layer or other additives to individual layers, since such is common practice in the art for increasing wear resistance.

The amendments and remarks filled by applicants in their last response have been fully considered. The claims, however, remain unpatentable in view of the new grounds of rejections. The finality of the previous office action is hereby withdrawn and inconvenience to the applicants is regretted.
